

1st meeting with mentor

make the vision document

store the artifacts

present

экран записывать можем

7 practice areas

- planing
- tracking
-

every meeting talk about 7 practice areas

ok make experience

we shiuld understand weare we are

we need to track us

we need create communication with the main customer for make changes in the project

раски матрица

ruski matrix (google)

mb work with customer expect

platform for

with

real world problem but not

will ask us about:

think about planing requirements risk management

not about

architecture

presentation:

it depends

discuse with team

team meeting depend on us

we have time tracker

what activities should be include track?

tracking depend on what can help us in our project

we decide it

do they pay a stipend?

Do you have a plan for the meetings?

I'll start by asking about your progress, then.

it's important to make progress, practice, discuss problems.

It depends on how we go.

in your experience as a mentor, what do you think?

we have dimensions, what is important, the customer has limited time, we have to show something ourselves, if we are not ready to show, why the meeting?

you can ask in the cart, meetings force to work, extra motivation.

in the beginning there will probably be a lot of meetings to fix requirements, the sooner we start working, the better.

We need to create a repository.

depends on the customer, what we want to show, what we plan to show, length between iterations, think about the development process.

Alexey is always available in chat, in a room I forget which one

spend 12 hours on the course

in the next 18, there will be only elective courses and industrial.

-
- create artifacts
 - analyze and create
 - artifact about all processes

ACTION POINTS

7 practice areas

- connection to practice areas
- bootcamp sessions

todo

planning req
risk

management

no arch and no

beginning

fix requiremens + start working

create repo etc
